Each train / test files have the same data — only the format differs — choose the one that you prefer working with

Dataset description

The label (y) can take one of two classes — 0, 1;
In total, there are 200 features (X);
Trainset consists of 8500 samples, testset has 1500;

Format description

data/*.csv — first column represents the label (i.e., y) and all other columns represent features (i.e., X); comma-separated
data/*.mat — matlab-file with 'X' (features) and 'y' (label) elements
data/*.libsvm — LIBSVM-format (first column is the label, all others are non-zero features together with their indices; more info is available here: https://www.csie.ntu.edu.tw/~r94100/libsvm-2.8/README)
